

This task includes making popups for appointments.

I have used calendar image as a screenshot in the designs. But you do not need to follow the design of this calendar exactly as it is. Instead, you can use any calendar as long as it looks modern, spacious and is similar to the calendar screenshot in the PSD files.

- Popup 1-a and Popup 1-b are the same popup. The only difference is the design of the time slots. Everything else is same.
- Popup-simple is a one page popup without next screens.
- The difference between popup a and popup b is only the variation of time slots.

Popup 1, 2 and 3 open in the middle of the page.

Popup 4 is a popup which opens from right side of the screen upon trigger.

And then there is an HTML page which has everything on the page instead of in a popup. Max-width of the HTML section should be 450px.

In other words, the task is one. And that is making popup 1-a. Everything else is the same with small variation.

please do not use Bootstrap. Keep class names unique to avoid conflict with other classes loading on the page.

you can add a prefix 'bks' with all classes to keep them unique.
